

Mod-Tec Inspection Point

√ The Betafit Inspection Point

Another *Innovative*

MOD-TEC

Product

Following enquires from hospital maintenance and nursing homes for an improvement in the finish of the Inspection Openings in their sterile floor areas, a list of concerns pointed out a need to eliminate the exposed cut edge of the vinyl which allows moisture from floor cleaning operations to gain entry to the flooring adhesives and harbour grime and therefore bacteria, found to be typical problems in many areas where

Inspection Openings & Grates exist.

The Betafit System with its simple screw down flange resolved all these concerns therefore the Betafit Inspection Point was evolved.

Now with its tough, clean finish to the Inspection Point a sterile finish is possible.

Ask to see a sample of the **Betafit Grates**
or

Inspection Point and the highly effective simplicity of the system can be appreciated,

designers who see and have specified the product agree:

"Its the only product of its type to install"

The Grates and Inspection Points are ideal for fitting into existing risers to repair non sterile interconnections between the floor covering & the Outlets.

*"The Betafit is the only
Inspection Point
for *sterile* areas."*
